A Street Play on 10 Years of Challenges for Environmental Issues

February 19: Nature Club of FAMT, organized a Street Play on 10 years of Challenges for Environmental Issues on 19th February, 2019 on the occasion of Utopia 2K19 to show the issues in conservation of nature due to lack of awareness and solutions to overcome these problems.

The play highlighted some issues like -

- Soil pollution
- Extinction of Birds & Animals
- Global Warming

The street play effectively presented how we were facing these issues in 2009 and are facing these issues on large scale in 2019 which has been affecting our health. The citizens understood their mistakes and took 10 years of challenge to change which resulted in increase in number of birds and animals increased in forest and level of water and reduced soil pollution.

The street play was performed by Nature Club members led by Ameya A Patkar. Prof. U. K. Samant, Nature Club Faculty Coordinator, and the core committee members supported in all the efforts.
